CONCEPT

2 Introduction

The current practice of exchanging business documents by means of telecommunications – usually defined as e-Business – presents a major opportunity to improve the competitiveness of companies, especially for Small and Medium Enterprises (SME).

The catalogue is an important document exchanged between trading partners, it marks the start of the trading cycle.

The developing of the Cross Industry Catalogue started as an initiative by CEN/ISSS Workshop eBES, the European Expert Group 1 (EEG1) – Supply Chain & e-Procurement.

The document describe globally consistent catalogue information exchange processes for worldwide supply chains and e-Procurement of commodities, using the UN/CEFACT Modelling Methodology (UMM) approach and Unified Modelling Language to describe the business processes and business documents involved.

The structure of this document is based on the structure of the UN/CEFACT Business Requirements Specification (BRS) document reference CEFACT/ICG/005.

Version 1.0.4 of the BRS was taken as the basis to develop the CCBDA Requirements Specification Mapping (RSM) version 1.

The structure of this document is based on the structure of the UN/CEFACT Requirements Specification Mapping (RSM) – Documentation Template Guidelines.

2.1 Audience

The main audiences for this document are the potential authors of individual RSMs. These are primarily the UN/CEFACT business and IT experts who are responsible for specifying the business requirements for e-business solutions in a specific domain and for furthering the development of solutions as relevant standards. Authors may include other standards bodies or users and developers in developed or developing economies.

2.2 Reference Documents

Knowledge and application of the following standards is crucial to the development of quality business requirements specifications. Other key references are shown in the appropriate part of the document.

- UN/CEFACT. Techniques and Methodologies Group (TMG). UN/CEFACT's Modelling Methodology (UMM): UMM Meta Model Core Module. (Candidate for 2.0). 2009-01-30.

Formal definitions of many of the technical terms used in this RSM guideline may be found in the above references but for convenience some key definitions are included in Annex 1 of this document.

3.1 Purpose and Scope

This project aims to standardize the business process and information entities of cross-industrial electronic cataloguing. In various industries all over the world, there are all sorts of cataloguing actions being performed. With the explosive spread of the Internet and the rapid growth of information technology, cataloguing activity is being performed electronically through the Internet as well as other business activities. With the realization of electronic cataloguing through the Internet and spreading practice of international electronic cataloguing, the needs for international standardization are thought to increase. According to such trends, the goal of this project is to make the business process and information entities within cataloguing activities standard.

3.2 Target Solution

The target solution is an implementation using XML schema based on the following UN/CEFACT specifications: CCTS 2.01, NDR 2.1, CCBDA 1.0 and the UN/CEFACT standard Supply Chain Reference Data Model.

4 Business Requirements Summary

In conjunction with the BRS document (UN/CEFACT Business Requirement Specification Cross Industry Catalogue Process Version 1.0.4), the purpose of this document is to provide a standard framework for the exchange of information.

4.1 Business Processes, Information Envelopes and Authorised Roles

The BRS Cross Industry Catalogue defines the following processes:

- Requesting a subscription
- Request a catalogue
- Providing a catalogue
- Requesting a catalogue Update
- Providing a catalogue Update

4.2 Business Partner Types and Authorised Roles

- Catalogue Information Receiver
- Catalogue Information Provider

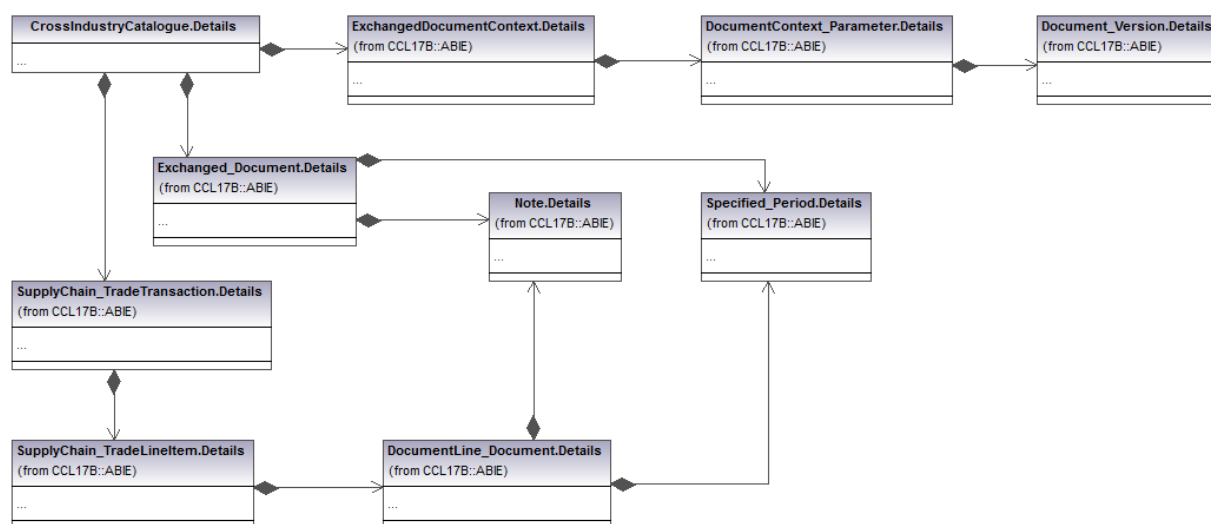

Table 3 Business Partner Types and Authorized Roles

Catalogue Information Receiver	Customer Organization

5 Conceptual Model

The conceptual model identifies the main Entity Classes. The following model is shown in the form of class diagram.

Figure 1 Cross Industry Catalogue conceptual data model

Philosophy behind the conceptual design

The conceptual design is based on the assumption that information exchanged in the order-to-pay (including the establishing of business agreements) process tends to have a large degree of similarity. Therefore rather than linking the information to message specific entities three neutral entities have been defined: Trade Agreement, Trade Delivery and Trade Settlement. These entities contain the main semantic payload for all communication exchanges, on header as well as on line level. on line level.

A fourth essential entity is the Trade Product entity. This entity holds all characteristics of the trade product that are independent of a particular trade transaction. The Trade Transaction and Trade Line Item entities serve to structure the entities mentioned before.

Description of the main entities

Header section of a catalogue

- Exchanged Document Context: Application processing information for the business document.
- Exchanged Document: Generic document heading information such as catalogue number, Issue date.
- Trade Transaction: Information on the trade transaction(s) to which the catalogue applies.
- Trade Agreement: information on the commercial agreement on which the catalogue trade transaction is based.

Line section of a catalogue.

- Document Line Details: Information on document line level such as line number.
- Trade_Product Group: Information on grouping of trade line items.
- Trade Line Item: Information on catalogue items.
- Trade Agreement: information on the commercial agreement on which the catalogue and trade transaction or catalogue line is based.
- Trade Delivery: information on the fulfillment of trade deliveries such as handling instructions.
- Trade Settlement: information on fulfillment of the financial settlements for a catalogue item such as tax information.
- Trade Product: Information on the product that is included in the catalogue.
- Product Instance: Information on the individual instances (objects) of a product.

6.1 Referenced CCL

CCL17B

Remark: Additions or changes to this CCL are included later in this section. During the harmonization process the change requests will be considered against the whole CCL and may lead to suggestions for the re-use or modification of existing core components.

6.2 Business Information Entity Model

For readability reasons the canonical model is provided in multiple diagrams, each providing a full description of a segment in the Cross Industry Catalogue. The three entities Trade Agreement, Trade Delivery and Trade Settlement support the entire Order-to-Pay process. In the individual steps of the process, such as the Catalogue, further refinements can be made on what is communicated on header and line level. Therefore in the canonical model for the Catalogue message the Trade Agreement entity is realized as two supply chain entities, one for the header and one for the line.

6.3 New and Changed Components

The new and changed components for the Cross Industry Catalogue will be identified by the SCRDM (Supply Chain Reference Data Model) project.

6.4 Detailed class diagrams

Below diagrams are detailing the CCTS Business Information Entities (BIEs) identified as part of the Cross Industry Catalogue. Compared to the canonical data model, as presented earlier, these multiple diagrams are broken down in a logical fashion. The Class Diagrams show the Aggregate Business Information Entity, and its properties (Basic Business Information Entities and its Association Business Information Entities), and relevant cardinalities.
