UN-18-00001	EB-2018-0001	EB	TBG03	A	MS	IFTSTA	Scenario: Provision of status information concerning a transport which includes multiple consignments. If the status reported for a transport is the same for all the included consignments we would like to be able to simply report the reference numbers of the included consignments within the same transport status. In the EDIFACT message type IFTSTA, the transport identification and status is currently specified in SG4\SG7\STS whereas the consignment number is specified in SG14\CNIbut it is not allowed to send the SG14 with only the CNI segment because SG15 is mandatory within SG14. This means that we would need to give the status for every consignment individually which couldlead to a significant amount of redundant information being transmitted in SG15/STS. We would like touse the RFF segment in SG4 to givethe numbers of all the included consignments but the maximum allowed repetition for the RFF segment on this level is only "9"and we know of many business cases where there are more than 9 different consignments on the same transport.	D
UN-18-00003	EB-2018-0003	EB	TBG04	B	MS	GOVCBR	The purpose of this update is to align the GOVCBR message with the related version (3.70) of the WCO Data Model	D
UN-18-00004	EB-2018-0004	EB	TBG01	B	CC	IPPOMO	With this generalized definition the code 40 is extended also for other types of vehicles, such as water or air vehicles. If the change is not accepted we request in our DMR for new codes, two additional specific codes.	D
UN-18-00006	EB-2018-0006	EB	TBG03	B	CR	TPFREP	The TPFREP message can either contain all container movements for the whole vessel (existing code 265) or only data for one container operator (new code for partial volume).	D
UN-18-00011	EB-2018-0011	EB	TBG03	B	CR	TPFREP	In the TPFREP message, the amount of power (measured in KWH) the terminal has provided to the vessel by a landside power generator, has to be reported for the purpose of financial settlement. This requires the definition of an according equipment type code qualifier.	D
UN-18-00012	EB-2018-0012	EB	TBG03	B	CR	TPFREP	The Number of moves for Lashing Equipment must be reported from the terminal to the vessel operator. Remark: Synonyms for Lashing Equipment are "gear boxes" or "twistlock boxes" or "yard equipment"	D

UN-18-00008/JT	JT-2018-00002	EB	TBG03	B	CR	TPFREP	The time until which the vessel operator has ordered the shore labour team (gang) to be available for loading / unloading operation must be reported by the terminal. It is needed for financial settlement between terminal and carrier. It can be earlier or later than actual vessel departure.	D
UN-18-00009/JT	JT-2018-00003	EB	TBG03	B	CR	TPFREP	The time when the vessel crew announced to be ready for cargo operation must be reported by the terminal. It is needed for financial settlement and operational alignment between terminal and carrier.	D
UN-18-00010/JT	JT-2018-00004	EB	TBG03	B	CR	TPFREP	The time when the vessel crew announced to be ready to sail must be reported by the terminal. It is needed for financial settlement and operational alignment between terminal and carrier.	D
UN-18-00013/JT	JT-2018-00005	EB	TBG03	B	CR	IFTSAI	The Estimated Arrival Date+Time of a vessel at the Pilot Area (before berthing) must be communicated from the carrier to various partners along with the schedule. In a vessel schedule, the pilot area (pilot station) is essential. Before arrival at the pilot station the carrier can determine the vessel speed himself, as to speed up in order to arrive earlier or to slow down in order to save fuel. Within the Pilot Area, the pilot takes full control over the vessel speed and operation, until berthing.	D
UN-18-00014/JT	JT-2018-00006	EB	TBG03	B	CR	IFTSAI	The Actual Arrival Date+Time of a vessel at the Pilot Area (before berthing) must be communicated from the carrier to various partners along with the schedule. In a vessel schedule, the pilot area (pilot station) is essential. Before arrival at the pilot station the carrier can determine the vessel speed himself, as to speed up in order to arrive earlier or to slow down in order to save fuel. Within the Pilot Area, the pilot takes full control over the vessel speed and operation, until berthing.	D
UN-18-00015/JT	JT-2018-00010	EB	TBG01	B	CR	DESADV	Global Good Agricultural Practice (G.A.P.) is an international body that certifies sustainable growers of Fruits & Vegetables.The growers get:- A Global GAP number (= GGN) for company. This is similar to a GLN.- A Global GAP certificate for each certified product category.This data is available in Global GAP database: https://database.globalgap.org	D
UN-18-00016/JT	JT-2018-00011	EB	TBG01	B	CR	RETANN	The healthcare provider needs to inform the supplier that a product is returned because of a safety alert issue by a regulatory agency	D
