**Message:** IFTSTA **NameChange:** N **Text1-1:** N **Text1-2:** N **Text1-3:** N

**DMRAction:** **Text2:** N **Text3-1:** N **Text3-2:** N **Text4-1:** N

**Name:** International multimodal status report message

**BusinessNeed:** In the automotive sector we often find that our users wish to send/receive more than one ID number for a trading partner. The NAD segment only allows the possibility to send a single ID number so in other messages (e.g. ORDERS and DESADV) we have adopted the practice of using the RFF segments linked to the NAD segment to carry these additional IDs. In the IFTSTA message, however, there are no RFF segments linked to the NAD segment so our current "work-around" is to repeat the NAD segment for each partner where we need to include an additional partner ID.

We therefore want to request the addition of an RFF segment (with a maximum repetition of 4) immediately below the NAD segment in Segment Group 1 of the IFTSTA message but we would be happy to consider any alternative solutions you may be able to suggest.

**Code Value:** TR **Name:** Terminal operator

**Description:** A party which handles the loading and unloading of means of transport.

### Notes:

### Industry:

**BusinessNeed:** In Brazil, the AEO Certificate is provide for each role that a company has.

For example: importer, exporter, and carrier. And we have two different roles for operators: port and airport operator.

The code list of roles in the EDIFACT codes 3035 has only code for maritime ports:(TR) - Terminal operator - A party which handles the loading and unloading of marine vessels

**Action:** A **ChgName:** N **ChgDesc:** N **ChgNote:** N

**Code Value:** **Name:** Port of next waste delivery

**Description:** The name and country of the next port where waste of any type will be delivered.

### Notes:

### Industry:

**BusinessNeed:** In the WCO Data Model we have a class WasteDeliveryPlace. This class is generic and can be used for several place types.

For this reason an element "Type of place of waste delivery, code" is included in this class.

Code list 3227 is used for this, but is missing the following codes:

- \* Port of last waste delivery The name and country of the last port where waste of any type was delivered
- \* Port of next waste delivery The name and country of the next port where waste of any type was delivered

**Message:** IFTMBC

**Action:** A **ChgName:** N **ChgDesc:** N **ChgStructure:** N **ChgNote:** N

**Composite Tag:** Transport service

**Description:** To identify a transport service.

**Notes:**

**Industry:**

**Business Need:** Container Shipping Lines offer their maritime transportation services by means of differently identified services. Each of these services defines a sequence of ports and a schedule for calling the ports. The service is offered with regular repetition (e.g. weekly) and is usually carried out by a multitude of different vessels. Moreover, such maritime transportation services may be provided by a consortium of different shipping lines combined by a vessel sharing agreement.

This is similar as it is in public transportation services where bus- or tramlines are providing a regular schedule-based service
