

Supporting the textile industry through digitisation

Trusted data allows interaction: Consumer to workers

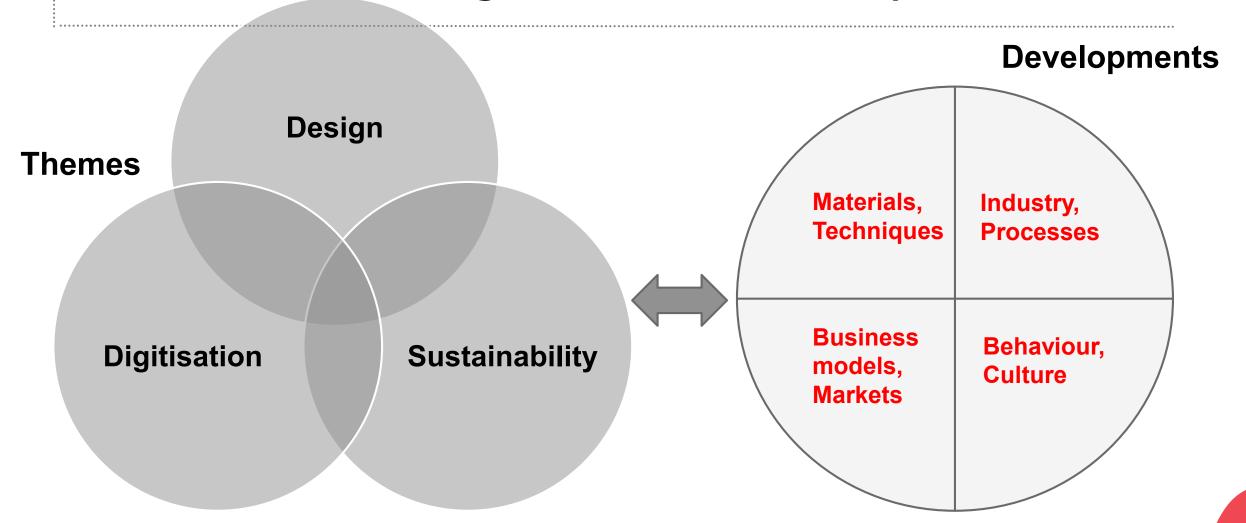

Model for advancing the textile industry

Model: Modint in cooperation with NL Next Fashion & Textiles

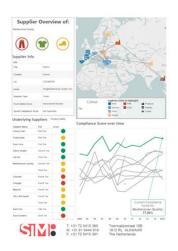

SIM Textile add-on-POC and Textile platform

- Modint has aligned several retailers and brands that want to start to collect data from their supply chain
- Modint and SIM have worked on the design and architecture of a the Textile platform
- Using all experience from SIM in other sectors and the know how of Modint (including Hyperledger technology)
- Distributed Ledger and Blockchain to be an integrated part of the solution

Due Diligence Database

the supply chain solution

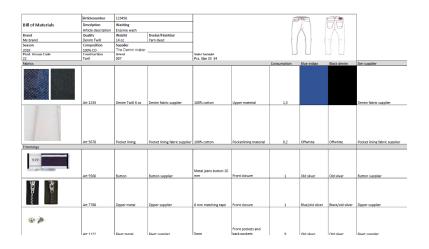

Importance of BOM information

Product driven data:

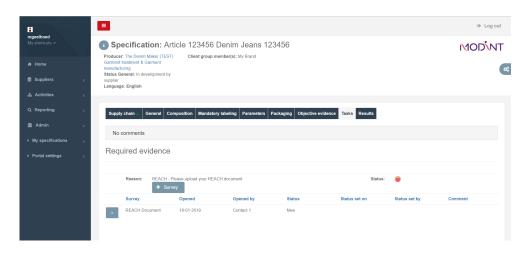

- Raw materials
- Processes
- Certificates
- Test reports

Actor tasks:

 Based on product risks assesment and agreed conditions

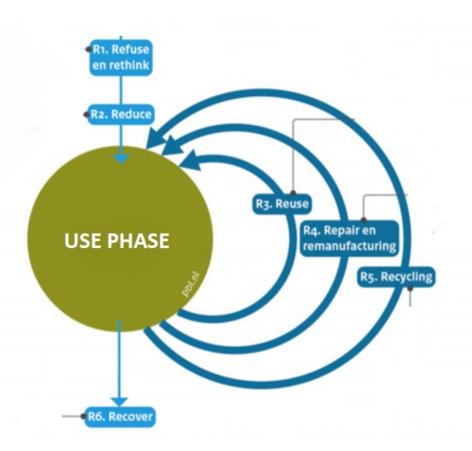

Textile chain conditions

- Incorporate taxonomy from start to end (designer vs producer language)
- Integration of standards
- Conditions for acceptance of required evidence
- Driven by Bill of Materials textile and product specific
- Accessible technology (diversity of technical levels of different actors)
- Scalable
- Timestamping certificates
- Aggregated data entry?

Circularity depends on data

Circularity depends on <u>correct and</u> <u>available</u> product data

Thank you
