

Introduction

Welcome to the readme file for the public review of the first Core Component Library based on CCTS 3.0. This file provides a summary of what the package contains, and how you can comment on it.

Background

This library was derived from the UN/CEFACT Core Component Library based on CCTS 2.01 published as D.11B. After extensive work by the Library Maintenance team as well as project members from the eTendering, Cross Industry Invoice, and Contract Financial Execution Management and Validation teams converting that library to CCTS 3.0, harmonization of the results, and quality assurance, the result is now available for public review.

Note that this file contains only the core component portion of the library, not the business information entities. As the formal validation procedures are still being developed, and the fact that CCTS 3.0 allows more segmented delivery of BIEs, the BIEs for the projects using this library will be provided as separate packages.

Contents

This package contains four files:

1. This readme file.
2. The CCL as a Microsoft Excel file
3. A blank comment log

Public Review Process

You can comment on the library by using the comment log file content.

All comments should be submitted to Chris Hassler (chris.hassler.ctr@dcma.mil) with a copy to Kevin Smith (kevin.smith@clouddatatech.com) not later than the deadline specified by the UNECE Secretariat.

Comments received will be used to improve both the deliverables as well as the processes used to produce them.
