

API TECHSPEC PROJECT

MEETING #3, DATE 2021-12-21 @ 10:00 BERLIN-TIME

Attendance

Present:
Jörg Walther (project leader) Ian Watts (supporting VC)
Thor Baunsgaard Gerhard Heemskerck Jenny Hertzfeldt Nis Jespersen Zisis Palaskas Andreas Pelekies Sue Probert Hisanao Sugamata
Maria Ceccarelli (UN secretariat) Kevin Bishop (UN secretariat)

Agenda of the meeting

- Deliverables and components of the project
- Template and content scope of the NDR document
- Next steps

Details of the discussion

JW presented the proposed deliverables and components (see also separate presentation):

- UN/CEFACT RDM2JSON NDR
- UN/CEFACT API DESIGN RULES (based on deliverables of the RDM2API project)
- Proof of concept artefacts using use-cases from CoO and Textile & Leather project:
 - Selected, use-case relevant JSON schema files
 - OenAPI 3.x YAML specs

The group agreed with the proposal.

MC confirmed that there is no contradiction between this project and the new initiative for RDM2JSON-LD specification. The latter project is rather supposed to take into account deliverables of this project.

AP presented the proposed table of content for the NDR specification. The group generally agreed to the proposal. GH suggested to use the UBL NDR as blueprint – to be evaluated.
