## **How to use ConfiFroms**

### How to use ConfiFroms

# **Principles**

Documentation: https://wiki.vertuna.com/display/CONFIFORMS/Documentation

#### **Getting started**

Here are a couple of key concepts for understanding ConfiForms:

- Forms are defined through two macros: "ConfiForms Form (Definition)" and "ConfiForms Field Definition"
- The "ConfiForms Registration Control" macro both configures how the form should be displayed and enables the display. This
  macro enables displaying the form as a dialog, embedded in the page, or formatted using the layout defined.
- A form can have multiple "ConfiForms Registration Control" macros associated with it. This means you can show the form on different pages in different ways.
- Data stored by the form can be used on different pages (using the View macros). This allows you to control which fields are shown and how they are displayed. Fields can be configured by placing "ConfiForms Field" macros inside View macros. See Multip le ways to show your form data in Confluence with ConfiForms

### Simple Example

all 3 components, 1) Definition, 2) Registration Control, 3) DataView are bellow, form itself have 4 fields 1) basic text field, 2) Checkbox, 3) checkbox group, 4) Drop down

#### **ConfiForm Definition**

using "ConfiForms Form Definition" macro

- serves for defining form, its fields, and logic
- should be on a separated page accessible only to UN Staff

Example:

ConfiForm TableView (data display)			
Form	Data		
using "C	onfiForms Table	View" macro,	
•		field that should separate page	of
Example	::		
Test	Test	Test	Т
Text	Checkbox	Checkbox	
Field	Field	Group	F
		Field	
This is 1st Test	yes	option 1 op tion 2	0
test	no	option 1	0

Back to:

### **ConfiForm Registration Control (form** display)

### **Form Presentation**

using "ConfiForms (Form View) Registration Control" macro,

- reference From DefinitionShould be on a separate page accessible to all users intended to use the form
  - Everyone for Expert Registration
  - Existing experts for simplified Event registration etc.

### Example:

### **Test Form**
